

PACAMOR KUBAR BEARINGS: MINIATURE AND INSTRUMENT BALL BEARINGS FOR INDUSTRIAL APPLICATIONS

QUALITY, RELIABILITY, DELIVERY, AND VALUE, what you expect from a preferred ball bearing manufacturer. Your company demands that every product launch or product upgrade be completed on time and within budget. At PACAMOR KUBAR, we are committed to partnering with you to satisfy all your requirements.

With PACAMOR KUBAR ball bearings installed in your industrial equipment, you can be confident that your precision industrial mechanism contains high quality, reliable, and domestically produced components. PACAMOR KUBAR bearings are regularly found in all types of flow control devices and temperature and pressure sensors. Chip conveyors rely on PACAMOR KUBAR, as do laser systems, and a variety of industrial robotic applications.

Our customers' requirements range from small volume, customized products to high volume standard products and everything in between. We understand that industrial bearings are exposed to harsh environments which is why we offer a range of designs and materials. Whether your application is a high tech robotic component or an intricate flow meter system, PACAMOR KUBAR offers the right bearing at the right price for nearly every industrial application.

As an American owned and operated small business, we have the flexibility to respond rapidly to your needs. With over 40 years of experience, PACAMOR KUBAR is a trusted name in miniature and instrument bearings. We remain committed to the success of the most important project launch — yours.

Bearing Design

PACAMOR KUBAR offers a range of retainer designs and materials including, but not limited to Crown, Ribbon, heat and moisture resistant Phenolic, and Torlon (polyamide-imide). In addition to selecting the right retainer for your application, dissimilar materials can prevent component welding and extend the life of the bearing in a variety of applications. To this end, we offer standard 400C stainless steel or optional ceramic balls or titanium carbide coated 440C stainless steel balls in our bearing designs.

PACAMOR KUBAR miniature and instrument bearings are available with up to ABEC 9 tolerances (as defined by the American Bearing Manufacturers' Association) with an optional flanged outer ring.

Bearing Lubrication

Bearings are supplied ready for use, complete with your choice of lubricant, including food-safe and moisture-resistant grease. Optional shields prevent the introduction of contamination during operation while permitting the bearing to be relubricated during machine maintenance.

Custom Products

PACAMOR KUBAR has options to satisfy any requirement. Technical expertise is available to assist with design engineering for custom products. Available options include, but are not limited to, custom rings, retainers, shields, lubricants, and packaging.

PACAMOR KUBAR offers the right bearing at the right price for all your precision miniature and industrial applications.
